FYI. Dan got a call from Matt Goddard (DTE). They are preliminarily interested in using the effluent from the Monroe Metro WWTP to provide fly ash wash water (I presume to help meet the ELGs). This is to preclude 327 requirements, etc. It's interesting that this also ties into a new effort from EPA on municipal water reuse (Charlie is leading our effort on that). I cannot see any issue with this but I know that more detail will come up as the NPDES permit reissuance is discussed. Thanks.
